

Sensor spotlight: radiosondes (1/2, GRUAN)

Resolving vertical structure (stratification) of ice-supersaturation.

GCOS Reference Upper-Air Network

- Good level of accuracy for humidity measurements
- GRUAN launches are sparse in the US (closest GRUAN site in Beltsville, MD; <10 launches/month)
- Other sondes can complement...

Sensor spotlight: radiosondes (2/2, WindBorne)

WindBorne sondes fly for weeks/months with dozens of soundings. RH measurements with $< 2\%$ uncertainty.
